PILE SURFACE COATING AND VIBRATORY EQUIPMENT

Note: The pile must be clean of any surface coatings in the clamping area of the vibratory clamping system.

Coatings may include but are not limited to Galvanization, Epoxy, Rust, ETC…

Failure to clean piles in the clamping area may cause clamp slippage and dropped piles.

In addition, the clamping teeth must be in good condition and all the teeth of the jaws must be in the work of the pile. (see “Worn Jaw Protocol)

Always have a safety line attached to the pile while driving or extracting.

Never carry the pile with the clamps.
